

9
SOFFORD. 1641.

A New Almanack and
Prognostication, for the
yeere of our Lord God,

1641.

Being the first from the
Bissextile, or Leap-yeare.

Calculated exactly for the Lati-
tude and Meridian of the most ho-
nourable Citie of London: But may
very well serve for most parts of great
Brittaine.

By A. Sofford Philomathist.

*Os homini sublime dedit, Caelumq; videre
Iussit, & erectos ad sidera tollere vultus.*

LONDON,

Printed by W. O. for the Company
OF STATIONERS.

Vulgar Notes and moveable Feasts, &c. this yeare, 1641.

SOFFORD. 1641.

A
Prognostication for the
Yeare of Grace. 1641.

Being the first from the Dissolution
of Leape-Yeare.

Containing a Chronologicall Table,
a Description of the foure Quarters of
the Yeare, with the Eclipses of
the Sunne and Moone,
and other things befit-
ting such a worke.

By ARTHUR SOFFORD, *Philomathist*.

PSAL. 8. 3.

*I will consider the Heavens, even the workes of thy
fingers; the Moone and the Starres which thou
hast ordained.*

LONDON:

Printed for the Companie of Sta-
tioners. M. 1641.

A plaine and easie Table, shewing the beginning,
continuance, and end of the Raigne of all the Kings
and Queenes of ENGLAND, since the Conquest,
with the time since the end of their Raigne
untill this present year, 1641.

The Kings names.	Began their Raigne.	Raigned yerres month. dayes.	Since the end of their Re.

1636	A very great Snow.	15
1638	A neither very deepe Snow.	13

A Prognostication,

Astronomical Calculations for this present
Yeare. 1641.

The True Precession of the Equinoctiall, or the Distance of the first Starre of Aries from the Equinoctiall point according to Tycho Brahe and Kepler is 28 degrees and 11 minutes.

The Obliquity of the Zodiacke according to Tycho Brahe is 23 deg. 31 minutes and 30 sec. But Kepler (accounting the Sunnes greatest Parallaxe lesse by 2 thirds then the Ancients and Tycho) would have the Obliquity lesse by one minute, viz. 23 deg. 30 min. 30 seconds: very neere the same which Regiomontanus useth in his Tables of Direction.

The Eccentricity of the Sunne according to the observations of Tycho Brahe is 3586 parts, the Semidiameter of the Eccentricke being 100000. And Kepler for such an Eccentricity vseth the Round number 3600.

	deg.	min.	sec.

The Moones Node
Ascendent or the Head of } ♄, 18, 9, 57, m
the Dragon.

Of the foure Quarters of the Yeare, and first
of the Winter.

The Winter quarter of this yeare began vpon the eleventh day of December, Anno Domini 1640. at
three

three of the clocke and 56 minutes in the morning. At which time the Sunne entered into the Tropicall signe of Capricorne making the shortest day and longest night to all that dwell on the North side of the Equinoctiall line. The length of the day being then with vs at London, 7 houres, 34 minutes, and 12 seconds: and the length of the Night, 16 houres, 25 minutes, and 48 seconds.

The nature of this quarter is cold and moist: and therefore is resembled to the first declining age, to Flegme, to Water, and to the West wind.

Of the Spring.

The Spring according to Astronomicall computation taketh beginning when the Sunne entrencheth into the first scruple of the Equinoctiall signe Aries, making equal Day and Night throughout the whole World. Which cometh to passe this yeare vpon the 10 Day of March, one minute before foure of the clocke in the Morning.

The Nature of this Quarter is hot and moist, and therefore resembled well to Youth, to Blood, to the Bze, and to the South winde.

Of the Summer.

The Summer being the third quarter Astronomicall, beginneth when the Sunne entrencheth into the first scruple of the Tropicall signe Cancer: which hapneth this yeare vpon the Eleventh Day of Iune, at 7 of the clocke, and 33 minutes in the Morning. At which time the Sunne maketh the longest Day and shortest Night to all that are on this side of the Equinoctiall line; the Day then continuing at London 16 houres, 25 min. and 48 seconds.

The nature of this quarter is hot and dry, and therefore is resembled to Infancie, to Choler, to the Fire, and to the East wind.

A Prognostication, Of the Autumne.

A Vturne of the Haruest-quarter, begins alwayes when the Sun entresth into the Equinoctiall sign Libra, thereby making the dayes once againe equall to the nights in all the world. Which will be this yeare vpon the 12 day of September, at 10 of the clocke and 33 minutes at night.

The nature of this quarter is cold and dry, and therefore not vnlike resembled to old age, to Melancholy, to the Earth and to the North wind.

Ouid Metamorph. Lib. 2.

Verque novum stabat cinclum florente corona,

Stabat nuda Aetas & spicea ferta gerebat :

Stabat & Autumnus calcatis sordidus urvis,

Et glacialis Hyems canos hirsuta capillos.

Eclipses.

There will be presented to the view of the Inhabitants of the earth this yeare, 4 Eclipses, two of the Sunne, and two of the Moone; whereof one onely and that of the Moone will be visible in our Horizon.

1. The first Eclipse will be of the Moone, vpon Thursday the 15 day of Aprill.

The beginning whereof will be at 10 of the clocke and 49 minutes in the forenoon.

The middle at 19 minutes after high noone.

The end at one a clocke and 48 minutes.

The Digits and Points darkned will be 9 and 43 min.

This Eclipse will be seen of y Antipodes, and generally wheresoever the Moone shall then be seen, being night to them, though mid day to vs.

2. The 2 Eclipse will be of the Sunne vpon the 29 day of Aprill, being the Thursday after Easter: which in generall for all the parts of the Earth where it will be seen in whole or in part, is thus limited in respect of the time as for example at London, and that according to the Rudolphin Tables: viz.

The beginning of the Eclipse at 6 of the clocke, and 19 minutes in the afternoon.

The

Sofford, 1641.

The beginning of totall darknesse at 7 a clocke and 42 minutes.

The middle of the Eclipse at 9 a clocke and 3 minutes.

The end of totall darknesse at 10 a clocke and 24 min.

And the end of every part of the Eclipse in any part of the Earth at 11 a clocke and 47 minutes.

This Eclipse cannot be seene in any part of the world but in the Sea called Mare Pacificum or Mar del Zur, and in one parts of Magellanica altogether unknowne to us.

The 3 Eclipse will be of the Moone, and will be seene in our Horizon, upon the 8 day of October being Friday in the morning.

The beginning will be at 5 of the clocke and 42 min.

The middle at 7 of the clocke and 12 min.

The end at 8 a clocke and 39 minutes.

The Digits or Points darkned will be 7 and 5 minutes.

The 4 Eclipse will be of the Sunne upon the 24 day of October being Sunday, which for the generall will be thus limited in respect of the time with this viz.

The beginning will be at 3 of the clocke and 48 min. in the morning.

The beginning of totall darknesse at 5 a clocke and one minute.

The middle of the Eclipse at 6 a clocke and 7 minutes.

The end of totall darknesse at 7 a clocke and 12 min.

And the end of every part of the Eclipse wheresoever at 8 a clocke and 25 minutes.

In the Latitude of 42 deg. North, and the Longitude of 80 deg. or 3 houres and 8 min. Eastward from the Meridian of London, that is in the North coast of Nova Scotia in the Arctic Sea, Northwest from Tripoli, the Sunne at the beginning will begin to be Eclipsed, and after that by degrees totally darkened.

In the North Lat. of 60 deg. and the Longitude of 76 degrees, or 2 houres and 51 min. Eastward from the Meridian of London, that is in a part of Russia, the Sunne will rise in their morning totally Eclipsed.

A Prognostication.

In the North Latitude of 33 deg. and the Longitude of 138 deg. 02 7 houres from the Meridian of London, Eastwards, viz. in the confines of the Kingdoms of Brames (in Tartaria) and the North part of India, extra Gangem the Sunne will be totally eclipsed in the 90 deg. of the Zodiacke about their one a clocke in the afternoone.

In the North Latitude of 37 degrees, and Longitude of 183. 02 10 houres from the Meridian of London, Eastward, viz. in the North Coast of the Island Japan, the Sunne will set totally eclipsed.

Lastly, in the North Latitude of 18 degrees, and the Longitude of 172 deg. 02 9 houres and a quarter Eastward from the Meridian of London, in the Ocean of China, or the Archipelago de St. Lazaro Eastward from the Philippine Islands; this great Eclipse having been seene, the Sunne will set in the very instant of the end thereof.

Briefe Rules of Husbandry.

Sow seedes, plant, graffe, the Moone in Taurus, Virgo, Capricorne, or Aquarius, the wind not Easterly.

Sheare sheepe in the increase of the Moone.

Fell timber for building towards and in the last quarter.

Feld or libbe Cattell, the Moone in Aries, Sagittarius, and Capricornus.

Kill for Swine for Bacon about full Moone.

Cut Wines in February or March,

Remoue trees the last Quarter of the Moone, between Halloeymas and Twelfeaide,

A Tide.
